SUMMARY

Full-Stack Developer with hands-on experience building web applications, scalable database models, and automated data pipelines using the MERN stack. Engineered secure multi-role authentication systems and optimized application state management to minimize network latency. Streamlined database index patterns to maximize system efficiency and responsiveness across enterprise-scale software environments.

TECHNICAL SKILLS

- **Backend Development:** Node.js, Express.js, RESTful APIs, MVC Architecture, JWT Authentication, Custom Middleware, API Routing.
- **Database Engineering:** MongoDB, Mongoose ODM, Schema Architecture, Index Optimization, Aggregation Pipelines, Query Performance.
- **Frontend Architecture:** React.js, Vite, JavaScript (ES6+), TypeScript, Redux Toolkit, Context API, Lifecycle Management.
- **DevOps & Tooling:** Git Version Control, GitHub Actions, Thunder Client API Testing, Vercel, Production Deployment.

KEY PROJECTS

RecruitAi – AI-Driven Intelligent Recruitment Suite (Final Year Project)

Nov 2025 – Present

- Collaborated on an automated applicant validation layout, building custom data parsers to reduce manual profile screening cycles by 50%.
- Streamlined production file transmission tasks using asynchronous content loaders, maintaining a verified 99.9% transmission success rate.
- Modeled performance indexing fields across MongoDB document structures, speeding up targeted candidate profile retrieval actions by 20%.
- Integrated advanced voice-to-text analysis logic to capture and evaluate real-time candidate responses accurately. [GitHub](#)

Pharmascribe-PMS Pharmacy Management System (React.js, Node.js, MongoDB)

Jan 2026 – May 2026

- Engineered transactional item controllers inside corporate stock tracking ecosystems, reducing data latency via Mongoose queries.
- Integrated multi-role validation routers to protect relational database trails, securing 100% data integrity for medical log entries.
- Constructed clear modular navigation interfaces utilizing Tailwind CSS styling engines, accelerating internal system navigation speeds by 45%. [GitHub](#)

E-Commerce Platform (React.js, Node.js, MongoDB)

Mar 2025 – Aug 2025

- Executed full-stack web engineering patterns to elevate primary application state-management efficiency by 40% using Redux Toolkit setups.
- Programmed secure administrative content control panels via Node.js/Express layers, lowering database schema validation overhead.
- Configured secure authentication routers and structural input data validation algorithms, expanding active session metrics by 30%. [GitHub](#)

Personal Developer Portfolio (React.js, Vite, Tailwind CSS)

Jan 2025

- Designed a single-page responsive user application layer, earning a 98+ score on global Google Lighthouse automated performance checks.
- Deployed continuous background build chains and modern asset streaming pathways on Vercel infrastructure to secure rapid paint execution.
- Configured optimized SEO meta tags and semantic HTML structures to improve search engine indexing and discoverability. [GitHub](#)

EDUCATION

Bachelor of Science in Information Technology | CGPA: 3.14

2022 – 2026

Pursued advanced computing methodologies, software engineering paradigms, and practical application design.
